BOSCH

Bosch Warehouse Booking

Find and book the right storage space that you need for your goods in transit.

Overview

Warehouses play a crucial role in modern supply chains, serving as central hubs for consolidation, de-consolidation, and customer fulfillment. However, despite the increasing need for storage space, it's often observed that existing warehouse capacity is underutilized. In response to this challenge, Bosch Warehouse Booking (BWB) Software has been developed to facilitate efficient space booking and allocation while ensuring transparency among stakeholders.

The BWB system serves the main purpose to facilitate the efficient scheduling and management of warehouse space, where businesses can find and book unused or underutilized warehouse space, providing flexible storage solutions.

Challenges Faced in the Industry

How do I deal with spontaneous storage requirements?

Is there a platform where I can expose my space for discovery?

Do I have to spend excess time searching for a warehouse that suits my requirements?

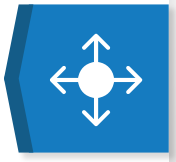

BOSCH

Key Features

Booking and Reservations

Simplifies the process of booking and reserving warehouse space, ensuring efficient resource utilization and minimizing delays.

Consolidated Space Allocation view with Control Tower

Overseeing the available vs occupied space, the risk of underutilization and over utilization of space is avoided.

Transparency of Logistics Ecosystem

Enhancing visibility of logistics ecosystems - MMLPs, ICD's, CFS's and cross docking facilities.

Bidding Process

Provides a transparent platform for warehousing space providers and customers to negotiate prices for warehousing space utilization.

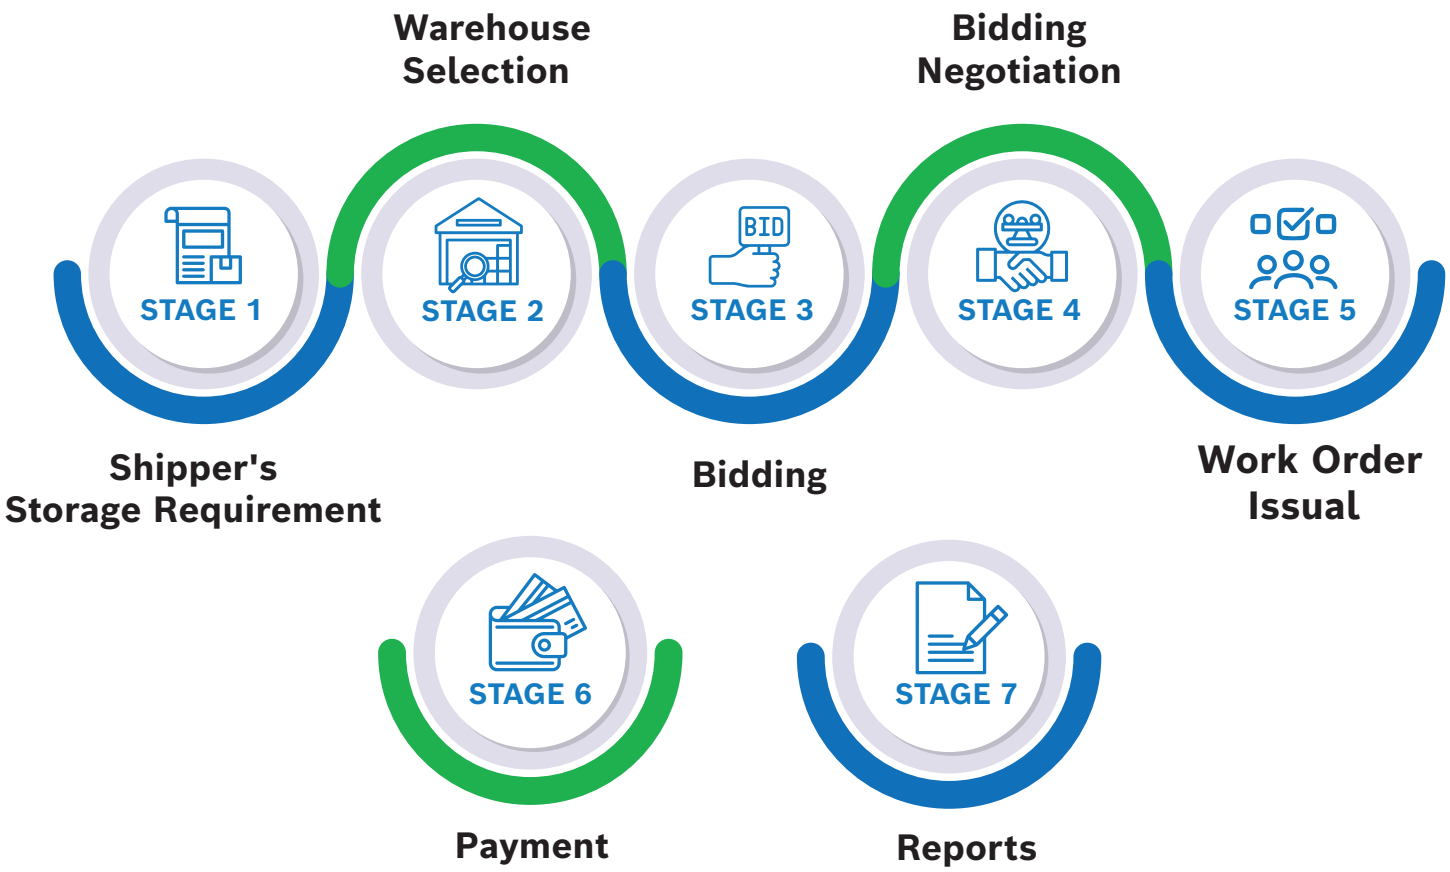

Mobile Accessibility

Easily stay in the loop and manage operations on the move with the system right in your pocket!

BOSCH

How Does It Work?

BOSCH
